

Vodavi Voice Mail Selection Guide

Vodavi offers a comprehensive array of voice processing solutions to meet a variety of communications needs. From basic voice mail through networked multi-site applications with Text-to-Speech e-mail reading over the phone, Vodavi has a messaging product that will help your customers increase productivity and communications throughout their organization. This guide will help you steer your customers in the right direction in choosing a Vodavi voice mail system.

Vodavi XTS In-skin Flash Voice Mail Card

Designed for small office applications, this is a great entry-level voice mail system that will allow users to reap the benefits of voice messaging with very little investment.

Vodavi TalkPath

For a more robust feature set and larger message storage capacity, this stand-alone unit is perfect for the medium-sized business needing advanced message notification options, sophisticated call routing or for businesses requiring message storage and retrieval over long periods of time.

PathFinder^{IS}

PathFinder^{IS} provides an intermediate solution between TalkPath and Digital PathFinder. PathFinder^{IS}: Supporting most features of the Digital PathFinder system, PathFinder^{IS} is an "In-Skin" solution for the XTS-IP and XTSc-IP product platforms, so the hardware installs directly into the XTS system cabinet. PathFinder IS is a robust messaging platform that comes standard with five user licenses of OneLook Unified Messaging, making it easy and affordable for users to enjoy the benefits of advanced messaging.

Digital PathFinder

Vodavi's flagship message processing solution is PC-based and offers all the features of our other voice mail systems, plus a host of options for greater flexibility and communications productivity. These include centralized voice mail across multiple locations, OneLook[®] Unified Messaging, ChalkTalk for automated outbound messaging, Desktop Call Control, Text-to-Speech e-mail reading and more.

PathFinder^{IP}

PathFinder^{IP} provides all the features of our Digital PathFinder and is designed to work exclusively with Vodavi's Telenium^{IP} LAN based communications system.
